

The question is, why would anyone buy a My First Piano for \$1000 when you can buy a similar keyboard with possibly more features for half the price?

The answer is in both the functional and aesthetics of the cabinet design and color.

In addition, the unit is promoted as an important part of the teaching program.

The USB plug plays a very strong part in higher tech interaction with digital teaching programs and connections to personal Ipads, iPhones, computers and other personal gear.

And finally, it is of real importance that this unit is void of buttons and confusing controls that have caused typical keyboards to become just a short lived play item.

My First Piano is a piano first!...
